### A · ROLES & ACCESS MODEL

Every screen in WH is protected by **role-based access control (RBAC)**. What a person sees and can do is decided by the **role(s)** assigned to their account and by a **scope** that limits which records they may touch. This section

explains the model once; each module below then lists who may use it.

THE PERMISSION GRID — 24 MENUS × 6 ACTIONS

Access is expressed as menu.action. There are **24 menus** (one per module, plus the administration areas) and **6 actions** on each:

- View** open and read the module
- Create** add a new record
- Edit** change an existing record
- Delete** remove a record (soft-delete, with a reason — recoverable)
- Activate** advance / approve / enable (e.g. approve a borrow)
- Deactivate** cancel / disable

Settings > Roles & permissions — the grid where each role's 6 actions per menu, plus the four scope rules, are set. Only a super\_admin may change it.

THE EIGHT ROLES

| Role             | What they are for                                                                                            |
|------------------|--------------------------------------------------------------------------------------------------------------|
| super_admin      | Full control of everything, including RBAC itself. Bypasses all permission checks.                           |
| admin            | Full control of all modules <b>except</b> editing RBAC (can view roles, not change them).                    |
| warehouse_staff  | Runs day-to-day warehouse operations: inventory, hand-over/return, deposit, dispatch, inspections, disposal. |
| approver         | Approves / signs transactions assigned to them (borrow, deposit, request, DA, disposal).                     |
| line_manager     | Same actions as approver, but scoped to their <b>department</b> .                                            |
| requester        | Raises their own borrow / deposit / request; views inventory and catalog.                                    |
| supplier         | Maintains their own product catalogue and sees their own orders / OGA.                                       |
| department_admin | Manages the equipment of their own department only.                                                          |

SCOPE — HOW FAR A ROLE CAN REACH

On top of the actions, four **scope rules** decide *which* records a role may act on. The highest-privilege role a person holds wins.

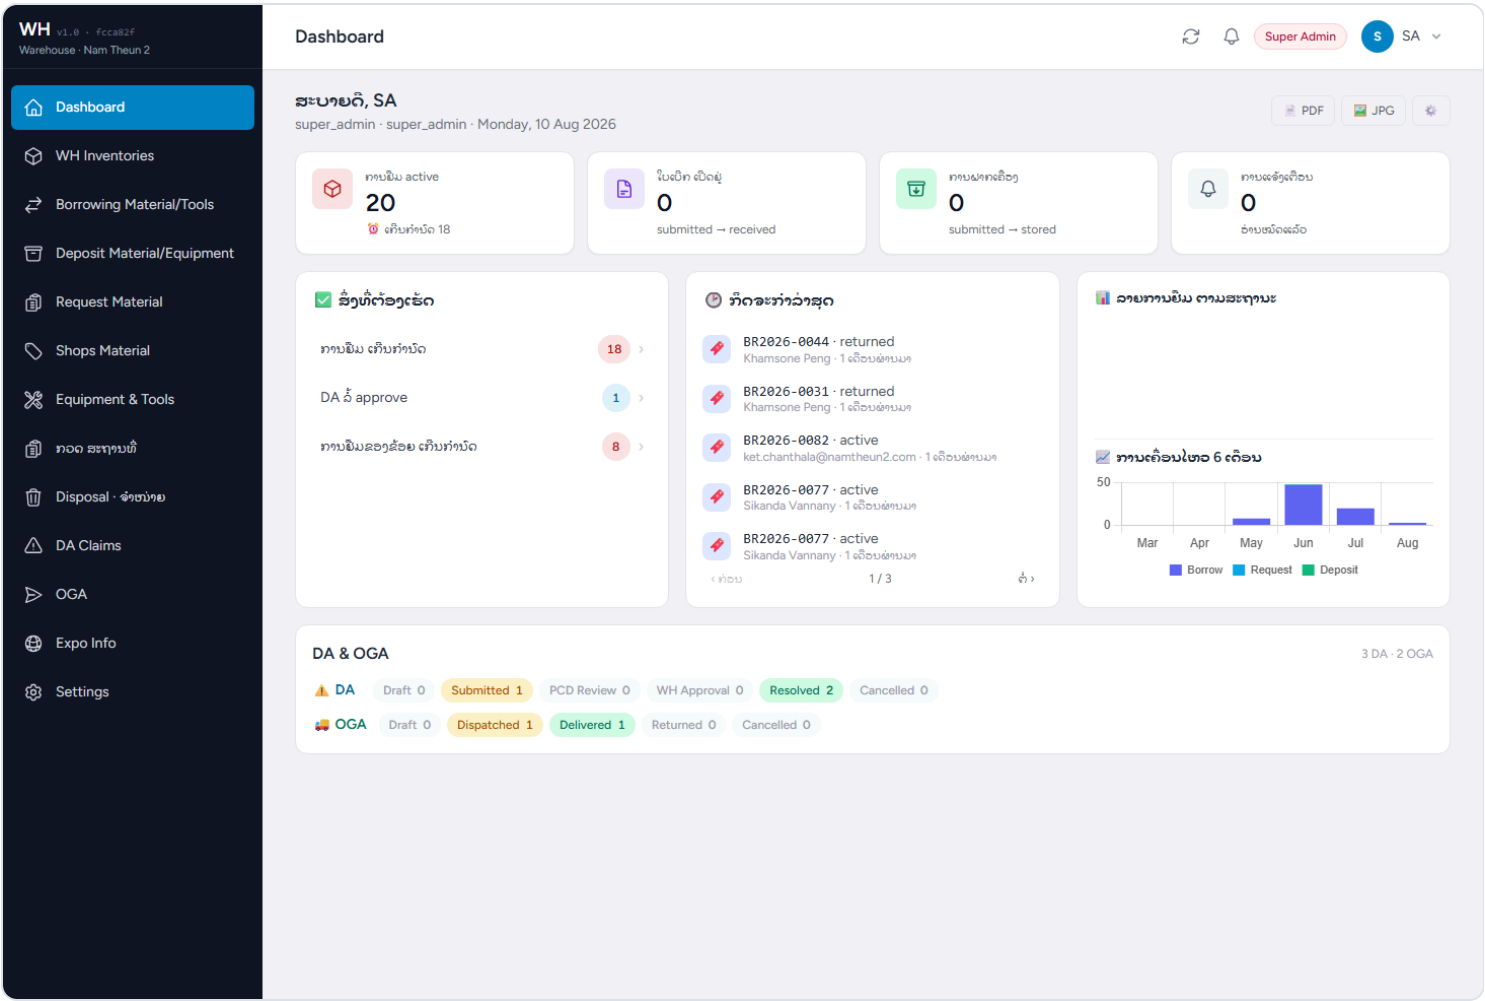

| Scope                 | Meaning                                             |
|-----------------------|-----------------------------------------------------|
| All                   | every record in the system                          |
| Department            | only records belonging to the person's department   |
| Assigned              | only records where the person is the named approver |
| Own                   | only records the person created                     |
| Own supplier / orders | only the supplier's own catalogue and orders        |

**Who defines the permissions?** A **super\_admin** sets every role's grid and scope in **Settings > Roles & permissions**. The **super\_admin** role itself is locked (read-only) so it can never be weakened by accident. People are given roles in **Settings > Users**; only a **super\_admin** may grant the **super\_admin** role. All permission changes and record actions are written to the **Audit log**.

Access legend used below — **Full** all six actions    **Manage** create/edit + activate/deactivate, no delete    **Create & approve**  
view/create/activate    **Create & edit** raise & change own    **View** read-only

B • MODULES

B1 Dashboard

The landing screen after sign-in — KPIs, an action queue of items awaiting the user, recent activity and 6-month trend charts.

WHAT IT IS

The home screen. It summarises the warehouse at a glance and routes the user to whatever needs their attention.

PURPOSE

Give every user a personalised overview — active borrows, requests to receive, deposits to store, items awaiting their approval — and quick trends. Tiles and their detail adapt to the user's role and scope.

The stock register — thousands of warehouse items with quantity, unit, location, photo and status; supports CSV import and delete-with-reason.

WHAT IT IS

The master register of everything held in the warehouse — the single source of truth for stock on hand.

PURPOSE

Record and track each item's quantity, unit, storage location, photo and status (available / borrowed / maintenance / low-stock). It feeds borrow, deposit, request and disposal.

Borrow register with per-item photos, borrower, return schedule and live status (active, overdue, returned) — shown with the 78 records migrated from the old system.

WHAT IT IS

The loan workflow for warehouse items and tools — from request, through approval and hand-over, to return.

PURPOSE

Control who has borrowed what, enforce return dates, and keep photographic proof at hand-over and return. Supports **progressive partial return** (receiving a multi-item slip back in stages) when enabled, and overdue tracking.

WORKFLOW

Draft → Acknowledged → Approved → Active (handed over) → Returned

Acknowledge and approve steps are configurable in settings; stock is decremented at hand-over and restored on return.

Safe-keeping register — items left in the warehouse for storage, with an assigned shelf/location and per-item photos.

WHAT IT IS

A safe-keeping service: items handed to the warehouse to be stored and later reclaimed by their owner.

PURPOSE

Track deposited items, assign a storage location/shelf, flag anything that needs fixing, and record the eventual claim — with photos throughout.

WORKFLOW

A stored item can be flagged **needs-fix** and returned to stored once resolved.

Material requisition register — items requested out of the warehouse, with VAT snapshot and SAP (PR/FR) close-out tracking.

WHAT IT IS

The requisition workflow for drawing materials out of the warehouse (ໃບເບີກວັດສະດຸ).

PURPOSE

Let staff request materials, route them for approval, have the warehouse validate and dispatch, confirm receipt (in full or in part), and close out against an **invoice number and SAP reference (PR/FR)**. VAT is frozen at submission.

Supplier product catalogue — materials with net prices; suppliers maintain their own entries.

## WHAT IT IS

A catalogue of supplier products (materials) with prices, used as a reference when requesting or purchasing.

## PURPOSE

Hold each supplier's product list and net pricing so requests and orders can reference real catalogue items. Suppliers keep their own entries current.

## WORKFLOW

Equipment register with condition inspections and preventive/corrective maintenance, driven by re-usable checklist templates.

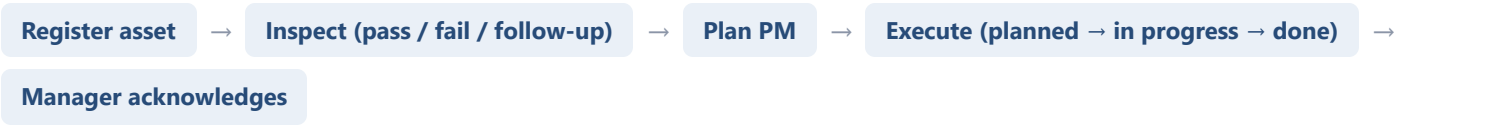

## WHAT IT IS

The asset register for equipment and tools, together with their **inspection** and **maintenance** history.

## PURPOSE

Track each asset (code, owner department, quantity by condition, photo); run checklist inspections; plan and record **preventive (PM)** and **corrective (CM)** maintenance. A failed inspection item automatically raises a corrective work-order.

## WORKFLOW

Maintenance types: preventive, repair (CM), service, other; frequencies monthly / quarterly / semi-annual / annual.

Workplace / area inspections against a template, each item scored Compliant / Non-Compliant / Not-Applicable.

WHAT IT IS

A template-driven checklist for inspecting a workplace or area, keyed to a location.

PURPOSE

Record area / safety inspections. Each item is marked **C** (compliant), **NC** (non-compliant) or **NA**. Non-compliant items require an observation and a date-stamped photo; the next due date is computed automatically.

Write-off of scrap / retired assets through a five-stage sign-off, updating the source registers on completion.

WHAT IT IS

The controlled write-off (ຈຳໜ່າຍ) of scrap or retired items, pulled from Inventory, Equipment or Deposit — or entered fresh.

PURPOSE

Retire assets with a full **five-signer** approval trail and, on completion, automatically update the source registers (equipment retired count, inventory de-activated, deposit annotated).

WORKFLOW — FIVE-STAGE SIGN-OFF

Discrepancy Advice — raised by the warehouse when goods received don't match, then reviewed by purchasing and approved by a leader.

WHAT IT IS

A formal notice of a discrepancy in goods received (wrong quantity, damage, spec mismatch).

PURPOSE

Raise, investigate and resolve receiving discrepancies with a three-party trail (warehouse → purchasing → leader).  
A resolved DA can spawn an OGA when goods must be sent back.

Outwards Goods Advice — a dispatch note for goods leaving the warehouse, with driver, truck and weight.

WHAT IT IS

A dispatch note recording goods sent out of the warehouse (including returns arising from a DA).

PURPOSE

Document outward movements — driver, truck plate, weight and delivery confirmation — so every item leaving the warehouse is accounted for.

WORKFLOW

A dispatched note may instead be marked **returned** with a reason.

A light record of exhibition / expo visits — events, companies and contacts met.

WHAT IT IS

A small record-keeping area for trade-expo activity (event → company → contact → notes).

PURPOSE

Log visits to exhibitions and the suppliers/contacts met, as a lightweight reference for procurement follow-up.

Settings > Users — accounts, their roles and department; the hub where access is granted.

WHAT IT IS

The administration hub: **Users, Roles & permissions, Organization & Facilities** (departments, locations, buildings, rooms), **Units of measure, Suppliers, Translations, System** settings, **Notifications / Email, Audit log, Reports** and **Backup**.

PURPOSE

Configure the system and control access. This is where accounts are created, roles are assigned, and the RBAC grid + scopes are defined; and where backups, the audit trail and reports live.

WORKFLOW

ACCESS & PERMISSIONS

| Role          | Access                              | Scope |
|---------------|-------------------------------------|-------|
| super_admin   | Full — incl. editing RBAC           | All   |
| admin         | Full except RBAC ( View roles only) | All   |
| everyone else | No access                           | —     |

**Chain of control:** super\_admin defines roles & scopes → assigns roles to users → each user then sees only what their role permits. The super\_admin role is self-locked, and only a super\_admin can create another.

C • ACCESS MATRIX (ROLES × MODULES)

Quick reference. **F** = Full · **M** = Manage (no delete) · **A** = Create & approve · **E** = Create & edit (own) · **V** = View · **–** = none. super\_admin is Full everywhere and is omitted.

| Module            | admin | warehouse_staff | approver | line_manager | requester | supplier | department_admin |
|-------------------|-------|-----------------|----------|--------------|-----------|----------|------------------|
| Dashboard         | V     | V               | V        | V            | V         | V        | V                |
| WH Inventories    | F     | M               | V        | V            | V         | –        | V                |
| Borrowing         | F     | M               | A        | A            | E         | –        | V                |
| Deposit           | F     | M               | A        | A            | E         | –        | –                |
| Request           | F     | V               | A        | A            | E         | V        | V                |
| Shops (Catalog)   | F     | V               | –        | –            | V         | E        | –                |
| Equipment & Tools | F     | M               | –        | –            | –         | –        | M                |
| Area Inspection   | F     | M               | V        | V            | –         | –        | –                |
| Disposal          | F     | M               | A        | A            | –         | –        | V                |
| DA Claims         | F     | M               | A        | A            | –         | –        | –                |
| OGA               | F     | M               | V        | V            | –         | V        | –                |
| Expo Info         | F     | M               | –        | –            | –         | –        | –                |

|                |    |   |   |   |   |   |   |
|----------------|----|---|---|---|---|---|---|
| Administration | F* | – | – | – | – | – | – |
|----------------|----|---|---|---|---|---|---|

\* admin has full administration access except editing RBAC (Roles & permissions), which only super\_admin may change. Scope still applies within each cell — e.g. line\_manager is limited to their department, requester to their own records, supplier to their own catalogue/orders, department\_admin to their department's equipment.
